

Node JS

Hello,

My name is Tatyana Korzun and I'm glad to introduce you our Content Management System for your needs.

“Why should we choose definitely your system?”, ask you

Security

Only authorized users are allowed to open this application and read it's data. (By jwt - tokens)

Caching

The system uses Redis to cache the results of the same requests and save your resources.

Logging

With our system you would be aware of every event inside it.

Ergonomics

The UI is user-friendly and simple to navigate.

Innovations

Only modern technologies and best practices.

Scalability

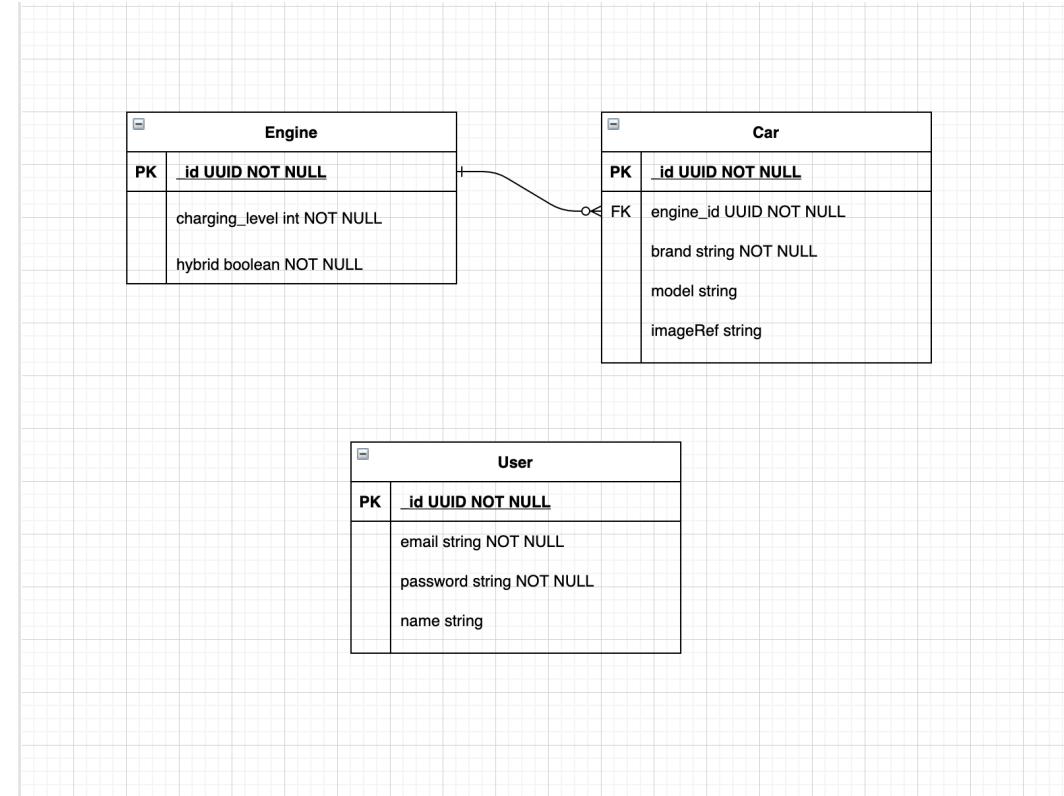

Mongo DB database is used in order to not manage the developers spend a plenty of time to think over the tricky models relationships and maintain them.

To be continued...

In the first release version of this CMS

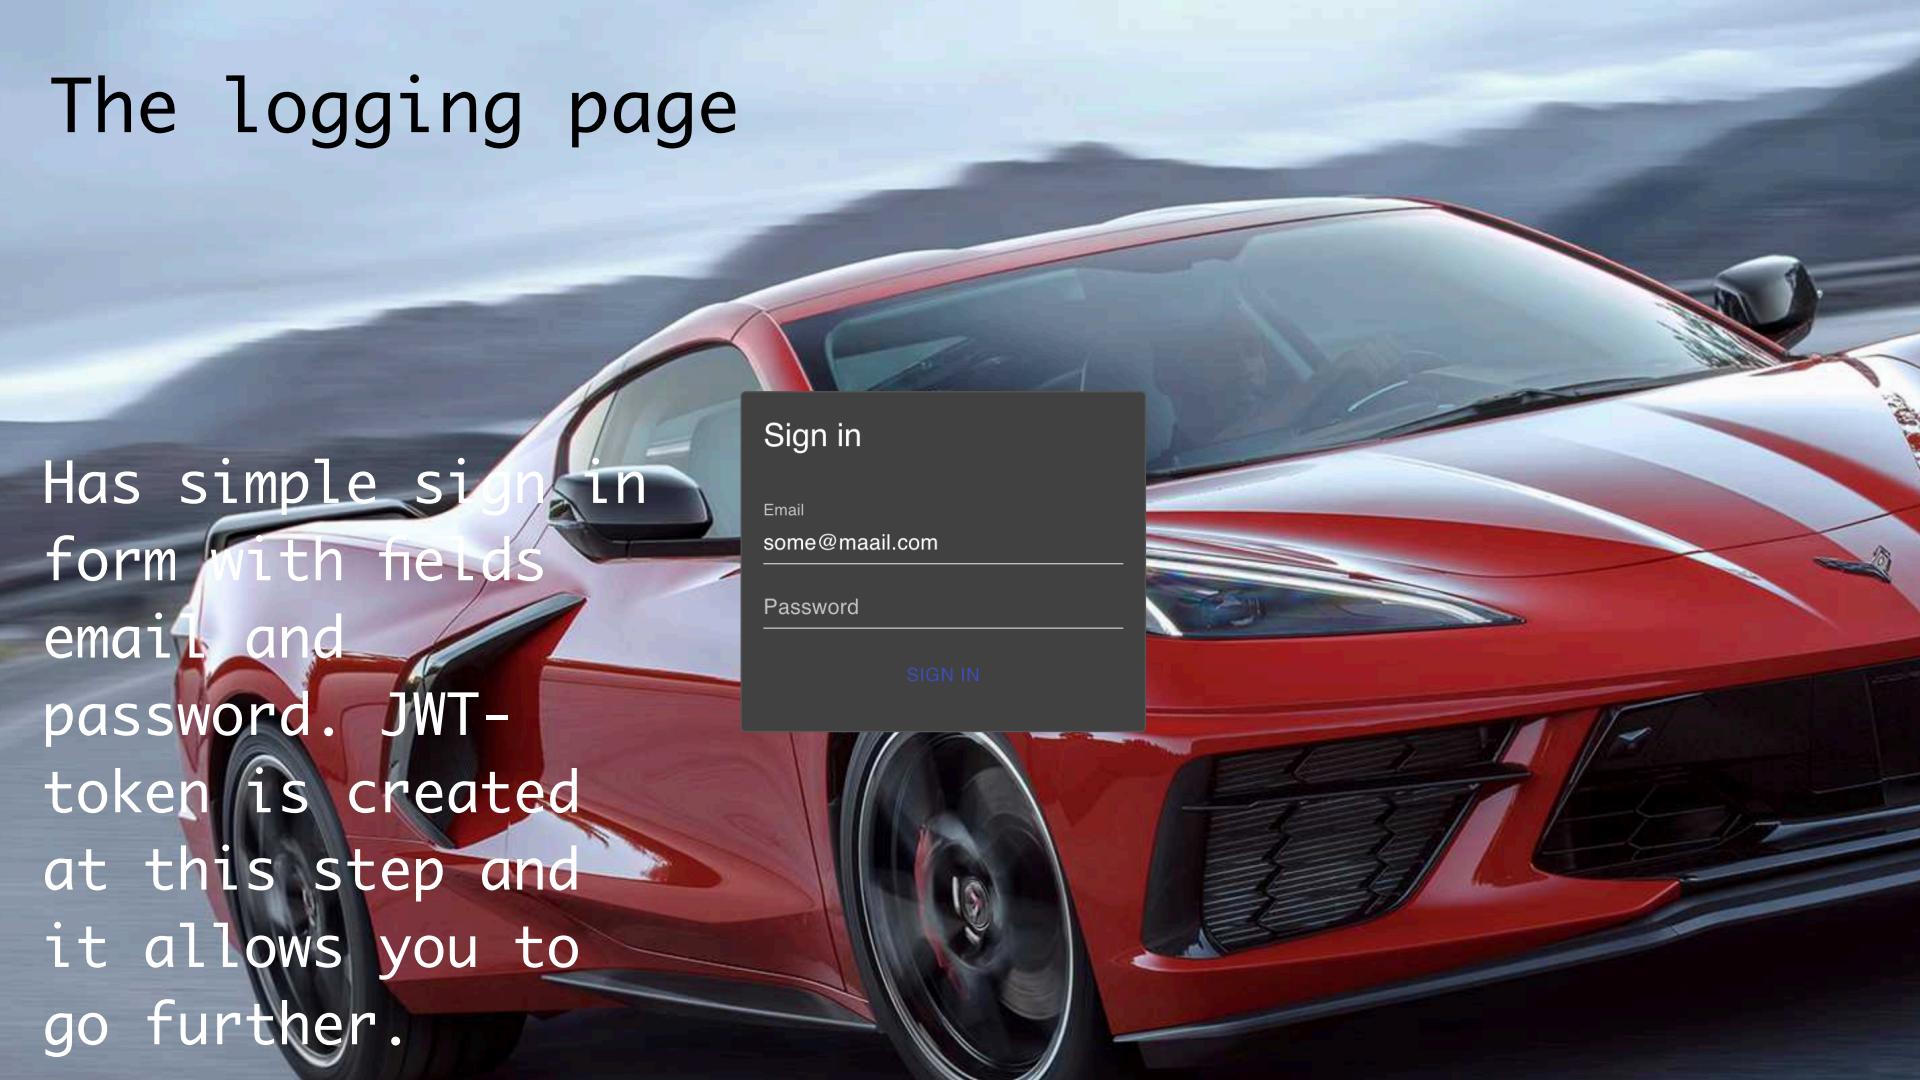

There is a model for a User of a system and models of a Car and an Engine with references to each other.

Let's dive deeper

The logging page

Has simple sign in form with fields email and password. JWT-token is created at this step and it allows you to go further.

A red sports car is shown from a front-three-quarter perspective, driving on a road with mountains in the background. A semi-transparent dark gray sign-in modal is overlaid on the lower half of the image.

And, it's only for the beginning...

There is a lot of interesting possibilities, and ways to scale. And you can choose your one. ;)

Thank you for your time and hope to
hearing from you soon!
